

CPC (Certified Professional Coder) Exam Review

The CPC (Certified Professional Coder) Review class is an optional addition to the Medical Coding Outpatient class, designed to provide a practical approach to coding. It covers a variety of specialties such as cardiology, dermatology, obstetrics, radiology, and oncology, with each chapter presenting an average of 10 real-life cases for coding.

Students are expected to complete 2-3 chapters weekly. The course also includes discussion boards that cover topics like credentialing, credentialing agencies, continuing education units (CEUs), job opportunities, and networking. It's an intensive course aimed at coders seeking to deepen their understanding of guidelines and apply them to real cases, serving as an excellent preparatory step for those pursuing the CPC credential through the AAPC.
